DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-28, drawn to passing configuration information between a DHCP server and a DHCP client where code field includes an indication of encryption of the value field , classified in class 713, subclass 150.
- II. Claims 29-52, drawn to booting a fixed function device attached to a network and rebooting the device using the stored network configuration, classified in class 709, subclass 220.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. The passing configuration information between a DHCP server and a DHCP client in claims 1-28 apart from being used with inventions of claims 29-552 in that it can be implemented in many different aspect of network security such as network data access control, management, usage control or key/password authentication. Invention II could be used in field of operation system configuration utility. Because these inventions are distinct for the reasons given above and acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated as proper.
